COUNTRY

MAEDA, AKIHIRO

TANAKA, MASUMI

MIZUGUCHI, SHOZO

## ASSIGNEE-INFORMATION:

NAME

COUNTRY

HITACHI LTD

APPL-NO: JP08226405

APPL-DATE: August 28, 1996

INT-CL (IPC): G06F 17/30

## ABSTRACT:

PROBLEM TO BE SOLVED: To input or retrieve information with an ambiguous name by providing a system, which registers information including a name and retrieves the information according to the name, with a dictionary wherein simplified names are made to correspond to formal names according to a rule based upon the features of the names.

SOLUTION: An alias management table generation processing part 02 generates an alias management table 09 through an alias simplifying process 07 on the basis of a data base 08 having a formal management name. An information registering process part 02 inputs information and finds a formal name, and registers the input information in an information data base 10 together with the formal name. The information data base 10 is provided with a field for managing the formal names for a data base storing information and a field for managing ambiguous names that user have inputted. A name registration assist agent 04 searches for and outputs a formal name for an input having no formal name in registered information, and an information retrieving process part 05 retrieves information on the basis of the inputted name.
